

The NASA Technical Memorandum written by Biospherical and NASA titled, ["Advances in Measuring the Apparent Optical Properties \(AOPs\) of Optically Complex Waters,"](#) NASA TM-2010-215856, is now available for download. This TM documents the Biospherical systems that support both in-air and in-water AOP determinations and describes the development of the Microradiometer and C-OPS, as well as the SHALLO family of instruments. For your convenience, PDFs of individual chapters from this TM have been included on our Web pages that deal with their respective instruments.
