

BSI presented a poster titled, "High Arctic Ultraviolet (UV) Radiation Levels in the Spring of 2011 Caused by Unprecedented Chemical Ozone Loss" at NOAA's Earth System Research Laboratory (ESRL), Global Monitoring Division (GMD) annual meeting this past May. Click [here](#) to see the entire agenda for the meeting, or read the part of the report titled "[Ozone and UV Radiation](#)" (Section 5c, starting on page S129) written by BSI staff, that resulted from the poster.
